

# Laboratory Services

Optimise your outputs with soil and forage analysis.

**Our diverse laboratory testing and analysis services (in soils, forage, animal feed, organic waste, serum, and tissues) give you access to results that you can trust.**

Whether you want to improve milk yields or beef production or understand the potential of your soils and maximise your crops, we're ready to test your samples.

Customers of SAC Consulting can benefit from our local and trusted office network where they can deposit soil and forage samples. We'll supply you with the correct packaging, log the samples for you using our digital portal system and take care of the logistics. Whatever you need, we make the process simple and strive to deliver a quality service that makes a difference to you and your business. Let us make it easy for you.

Our service is offered through a unique partnership with Eurofins Agro Testing UK and is the only one of its kind in Scotland to blend in house commercial laboratory testing with research, reporting and consultancy.

We offer guidance, support, and continuity for our customers from the moment the sample is taken, through to interpretation and advice once test results are delivered.

All testing is accredited to either UKAS standards ISO 17025 or BSI ISO 9001 and our highly specialised laboratory staff work closely with our consultants and offices to maintain quick turnaround times and comprehensive understanding of your results.

Our full list of tests and prices are available on request, and we are always happy to field enquiries about tests and analysis that may not appear on our list.

**Get in touch with your local SAC Consulting office for more details.**
